R.A. Ramanujan , M.D.	Dorinda Potchinsky	Sip few weeks and update. Thanks	02-05-2025

Dorinda Potchinsky	R.A. Ramanujan , M.D.	Hi Lexi. So he doesn't want to switch me to something else ? I should continue with the Mounjaro ? Or go off and see what happens?	02-05-2025
null Lexi Matthias, LPN	Dorinda Potchinsky	HI DORINDA, DR RAM reviewed your PHOTOS. HE DOES NOT BELIEVE IT IS RELATED TO THE MOUNJARO. HE AGREES IT MIGHT BE AUTOIMMUNE-RELATED.	02-05-2025
Dorinda Potchinsky	R.A. Ramanujan , M.D.	I couldn't get into the patient portal. I need an activation code? I sent the pics through here. hope you get them ok	02-05-2025

Systolic Variability Trends

- 1. **CV** –The coefficient of variation (CV) is the ratio of the standard deviation to the mean. The higher the coefficient of variation, the greater the level of dispersion around the mean, Units = mmHg.
- 2. **ARV** – Average real variability (ARV) is a method for measuring short-term, reading-to-reading, within-subject variability. It is defined as the average of the absolute differences between consecutive readings, Units = mmHg.
- 3. **SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean), Units = mmHg.

Diastolic Variability Trends

Kalman Trends

- 1. **Mean(Arithmetic Mean)** – Mean is the average of a set of numbers
- 2. **SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean).
- 3. **V**- Variance determines the spread of numbers.. It measures how far each number in the set is from the mean (average) and from every other number in the set.

PSR

PSR: Pulse stiffening ratio (PSR) is the ratio between systolic and diastolic stiffness. It can be expressed as $PSR = \frac{[systolic\ stiffness]}{[diastolic\ stiffness]}$.

HbA1c Trends

Others Trends

1. **MAP:PP Ratio**- Mean Arterial Pressure : Pulse Pressure Ratio
2. **HASI**- Home arterial stiffening index
3. **HSASI**- Home Symmetric arterial stiffening index
4. **PP**- Pulse Pressure
5. **WIF or widening factor number**. $WIF = K - 1 / \ln(K) - 1$, where K is the variability ratio ($K = \text{Systolic Std. Dev} / \text{Diastolic Std. Dev}$)
6. **eIPP**- Elastic component of pulse pressure. $eIPP = (PP - stPP)$
7. **stPP**- Stiffening component of pulse pressure. $stPP = PP / (1 + WIF)$

eCO graph

eCO (Estimated Cardiac Output) Normal range to be added 5 – 10 liters/minute

Units of eCO (Estimated Cardiac Output) – liters/minute

eCBP graph

eCBP (Estimated Central Blood Pressure) normal range – 0 – 100 mmHg

1. Cardiac output scale is in liters/minute. Normal range at rest is 5-6 liters/min and (with activity goes up to 30 -35 liters/min)

2. Central mean BP is Squared, Mean radial artery BP/diastolic BP in mmHg. Scale in mmHg and range is in mmHg and the scale Should be between 0-50 50-100, 150 and 200 mmHg. No established normal at the moment.

MAP graph

MAP -Mean arterial blood pressure. MAP = Diastolic blood pressure + 1/3(Systolic blood pressure – Diastolic blood pressure)
