Douglas Shearer	R.A. Ramanujan , M.D.	Could I have the office fax number? I have a hepatic panel from 10/31/25 that my cardiologist ordered. they added on a CK which was 298. I had an appointment with Dr. Robillard this morning and she thought you might want to know this given the meds I'm taking	26-11-2025

Douglas Shearer	R.A. Ramanujan , M.D.	I have one more syringe left of Mounjaro. could I have a prescription for it sent to my pharmacy if you intend for me to continue using Mounjaro?	18-11-2025
null Sue Ward	Douglas Shearer	Medicare open enrollment has begun and will continue through December 7th. If you choose a plan we don't participate with, we will not be able to continue seeing you. As always, we require you to present your insurance card & copay at every visit, so remember to bring insurance card with you. The Medicare Advantage plans we participate with are AARP Medicare Aetna Medicare BCBS/Excellus Medicare CDCPHP Medicare Cigna/MVP Medicare Humana Medicare Medicare/Medicaid Railroad United Healthcare Medicare United Healthcare Dual Complete If you have any questions, please contact out office at 607-723-1676. We have sent a similar message through the patient portal as well. No response back through the checkmyvitals is needed. Hope to see you all next year DCA providers and staff	06-11-2025

Systolic Variability Trends

1. **CV** –The coefficient of variation (CV) is the ratio of the standard deviation to the mean. The higher the coefficient of variation, the greater the level of dispersion around the mean, Units = mmHg.

2. **ARV** – Average real variability (ARV) is a method for measuring short-term, reading-to-reading, within-subject variability. It is defined as the average of the absolute differences between consecutive readings, Units = mmHg.

3. **SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean), Units = mmHg.

Diastolic Variability Trends

Kalman Trends

1. **Mean(Arithmetic Mean)** – Mean is the average of a set of numbers

2. **SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean).

3. **V**- Variance determines the spread of numbers.. It measures how far each number in the set is from the mean (average) and from every other number in the set.

PSR

PSR: Pulse stiffening ratio (PSR) is the ratio between systolic and diastolic stiffness. It can be expressed as $PSR = \frac{[systolic\ stiffness]}{[diastolic\ stiffness]}$.

HbA1c Trends

Estimated HbA1c - eHbA1c

Others Trends

1. **MAP:PP Ratio**- Mean Arterial Pressure : Pulse Pressure Ratio
2. **HASI**- Home arterial stiffening index
3. **HSASI**- Home Symmetric arterial stiffening index
4. **PP**- Pulse Pressure
5. **WIF or widening factor number**. $WIF = K - 1 / \ln(K) - 1$, where K is the variability ratio ($K = \text{Systolic Std. Dev} / \text{Diastolic Std. Dev}$)
6. **eIPP**- Elastic component of pulse pressure. $eIPP = (PP - stPP)$
7. **stPP**- Stiffening component of pulse pressure. $stPP = PP / (1 + WIF)$

eCO graph

eCO (Estimated Cardiac Output) Normal range to be added 5 – 10 liters/minute

Units of eCO (Estimated Cardiac Output) – liters/minute

eCBP graph

eCBP (Estimated Central Blood Pressure) normal range – 0 – 100 mmHg

1. Cardiac output scale is in liters/minute. Normal range at rest is 5-6 liters/min and (with activity goes up to 30 -35 liters/min)

2. Central mean BP is Squared, Mean radial artery BP/diastolic BP in mmHg. Scale in mmHg and range is in mmHg and the scale Should be between 0-50 50-100, 150 and 200 mmHg. No established normal at the moment.

MAP graph

MAP -Mean arterial blood pressure. $MAP = \text{Diastolic blood pressure} + \frac{1}{3}(\text{Systolic blood pressure} - \text{Diastolic blood pressure})$

Reference & Abbreviations

Guide to abbreviations and blood pressure, pulse and other Metrics.

HBPM -Home blood pressure measurement.	HBS -Home blood sugar
PP -Pulse pressure	AP -Average pulse
BPV -Blood pressure variability	SV -Systolic variability
DV -Diastolic variability	PV -Pulse variability
ARV -Average real variability	CV -Coefficient of variation %
SD -Standard deviation	MAP -Mean arterial blood pressure
MAP: PP Mean Arterial Pressure : Pulse Pressure	HASI -Home arterial stiffness index
HSASI -Home Symmetric arterial stiffness index	Estimated CO -Cardiac output [CO= (PPxHR)x.002]
PSR Pulse stiffening ratio. (PSR = SBP/DBP or slope of systolic BP/slope of diastolic BP)	

Estimated central blood pressure ECBP (ECBP = brachial MBP2/brachial DBP or ECBP = radial MBP2/radial DBP)

Normal Ranges.

Systolic BP 110 – 120 mm Hg

Diastolic BP 70 – 80 mmHg

Pulse 60 - 100/min

Pulse pressure (PP) 40 mmHg (Low PP less than 25% of the systolic BP and high PP greater than 100 mm Hg)

Normal stroke volume (SV) 60 -100 ml

Cardiac output (CO) SV x pulse rate/min

Estimate Cardiac output = Stroke volume / m

Blood pressure variability; Not defined in USA. But desirable ranges ESH guidelines; Systolic day time BP less than 15 mmHg and Diastolic less than 7.9 mmHg and Weighted SD less than 12.8 mmHg for systolic

Definitions.

MAP:PP ratio not defined.

Pulse stiffening ration; Not defined. $\text{Pulse pressure} \times \text{inverse log (std. dev. systolic / std. dev. Diastolic) / (std. dev. systolic / std. dev. Diastolic)} - 1$ (Pulse pressure $\times \ln(K)/(K-1)$ where K is systolic Sd /diastolic SD.)

Home arterial stiffness index; Not defined

Home arterial symmetric arterial index: Not defined.

Central blood pressure:Not defined
