

40 Mitchell Ave, Binghamton, NY 13903 Phone:(607) 723-1676

Patient Name: Morgan Sergi
Height:

MRN #: 8369
Weight:

Birth Year:
Hypertension: S1

Blood Pressure Averages

Blood Pressure Averages: Weekly

Week	Systolic(n)	Diastolic(n)	Pulse(n)
11-23-2025	104 (1)	70 (1)	69 (1)
11-16-2025	117 (1)	67 (1)	88 (1)
11-09-2025	119 (1)	77 (1)	63 (1)

Blood Pressure Averages: Monthly

Month-Year	Systolic(n)	Diastolic(n)	Pulse(n)
11-2025	113 (3)	71 (3)	69 (39)

Blood Pressure Averages: Quarterly

Quarter-Year	Systolic(n)	Diastolic(n)	Pulse(n)
10-2025	113 (3)	71 (3)	69 (39)

Blood Pressure Averages: Yearly

Year	Systolic(n)	Diastolic(n)	Pulse(n)
2025	113 (3)	71 (3)	69 (39)

R.A. Ramanujan , M.D.	Morgan Sergi	🔥	01-12-2025
Morgan Sergi	R.A. Ramanujan , M.D.	Hi, my RX has four pills left. Is it possible to take an afternoon dose along with the morning dose (maybe around 1:00 or 2:00 PM)?	01-12-2025
Morgan Sergi	R.A. Ramanujan , M.D.	Happy Thanksgiving!	28-11-2025
R.A. Ramanujan , M.D.	Morgan Sergi	Happy Thanksgiving!	26-11-2025
R.A. Ramanujan , M.D.	Morgan Sergi	🙏	25-11-2025
Morgan Sergi	R.A. Ramanujan , M.D.	The RX was 14 days and the pharmacy had to order it. Will we continue beyond that? I'll just continue with the morning dose and we'll reevaluate after the 14 day supply is up? Thank you - I'm so happy you've been able to help!	25-11-2025
R.A. Ramanujan , M.D.	Morgan Sergi	GM, Thanks for the input. please alert in advance before you run out of supply. HTG	25-11-2025

Morgan Sergi	R.A. Ramanujan , M.D.	Hi, 1st dose taken Sat AM. Initially jittery and heart rate up but evened out as the day went on. I am noticing a good difference that might be hard to describe. For a few hours after taking the med there's a calm happiness that kicks in. Almost like my body isn't fighting itself from the inside out and it allows me to focus and concentrate on other things. Another dose around 1:00 would help me carry that through the rest of my day. My sleep seems slightly deeper and a little bit more rested in the morning. Still some of that pain in my hip area and I've always gotten some burning pain in a lower part of my neck/back that still comes out later in the day. I'm not expecting perfection but the last few days makes me feel like there is hope to fix some of the things I've thought I just have to push through and deal with. I'll continue with the single dose in the morning. Thank you!	25-11-2025
R.A. Ramanujan , M.D.	Morgan Sergi	Rx sent	17-11-2025
Morgan Sergi	R.A. Ramanujan , M.D.	607.206.6726	15-11-2025
Morgan Sergi	R.A. Ramanujan , M.D.	Hi, I'm available anytime today. Thank you, Morgan	15-11-2025
R.A. Ramanujan , M.D.	Morgan Sergi	GM, Good time window to at home ??	14-11-2025
Morgan Sergi	R.A. Ramanujan , M.D.	Hi, Dr. Ramanujan. Are we looking at choosing one of these three treatment options right now: testosterone, viagra or phentermine? It looks like at least for the Viagra and phentermine that they are short term medications. Would I take one of these for a short period of time, track data/results and we would re-evaluate? Thank you, Morgan	14-11-2025

Systolic Variability Trends

- 1. **CV** –The coefficient of variation (CV) is the ratio of the standard deviation to the mean. The higher the coefficient of variation, the greater the level of dispersion around the mean, Units = mmHg.
- 2. **ARV** – Average real variability (ARV) is a method for measuring short-term, reading-to-reading, within-subject variability. It is defined as the average of the absolute differences between consecutive readings, Units = mmHg.
- 3. **SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean), Units = mmHg.

Diastolic Variability Trends

Kalman Trends

1. **Mean(Arithmetic Mean)** – Mean is the average of a set of numbers

2. **SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean).

3. **V** - Variance determines the spread of numbers.. It measures how far each number in the set is from the mean (average) and from every other number in the set.

PSR

PSR: Pulse stiffening ratio (PSR) is the ratio between systolic and diastolic stiffness. It can be expressed as $PSR = \frac{[systolic\ stiffness]}{[diastolic\ stiffness]}$.

HbA1c Trends

Others Trends

1. **MAP:PP Ratio**- Mean Arterial Pressure : Pulse Pressure Ratio
2. **HASI**- Home arterial stiffening index
3. **HSASI**- Home Symmetric arterial stiffening index
4. **PP**- Pulse Pressure
5. **WIF or widening factor number**. $WIF = K - 1 / \ln(K) - 1$, where K is the variability ratio ($K = \text{Systolic Std. Dev} / \text{Diastolic Std. Dev}$)
6. **eIPP**- Elastic component of pulse pressure. $eIPP = (PP - stPP)$
7. **stPP**- Stiffening component of pulse pressure. $stPP = PP / (1 + WIF)$

eCO graph

eCO (Estimated Cardiac Output) Normal range to be added 5 – 10 liters/minute

Units of eCO (Estimated Cardiac Output) – liters/minute

eCBP graph

eCBP (Estimated Central Blood Pressure) normal range – 0 – 100 mmHg

1. Cardiac output scale is in liters/minute. Normal range at rest is 5-6 liters/min and (with activity goes up to 30 -35 liters/min)

2. Central mean BP is Squared, Mean radial artery BP/diastolic BP in mmHg. Scale in mmHg and range is in mmHg and the scale Should be between 0-50 50-100, 150 and 200 mmHg. No established normal at the moment.

MAP graph

MAP -Mean arterial blood pressure. $MAP = \text{Diastolic blood pressure} + 1/3(\text{Systolic blood pressure} - \text{Diastolic blood pressure})$

Reference & Abbreviations

Guide to abbreviations and blood pressure, pulse and other Metrics.

HBPM -Home blood pressure measurement.	HBS -Home blood sugar
PP -Pulse pressure	AP -Average pulse
BPV -Blood pressure variability	SV -Systolic variability
DV -Diastolic variability	PV -Pulse variability
ARV -Average real variability	CV -Coefficient of variation %
SD -Standard deviation	MAP -Mean arterial blood pressure
MAP: PP Mean Arterial Pressure : Pulse Pressure	HASI -Home arterial stiffness index
HSASI -Home Symmetric arterial stiffness index	Estimated CO -Cardiac output [CO=(PPxHR)x.002]
PSR Pulse stiffening ratio. (PSR = SBP/DBP or slope of systolic BP/slope of diastolic BP)	

Estimated central blood pressure ECBP (ECBP = brachial MBP2/brachial DBP or ECBP = radial MBP2/radial DBP)

Normal Ranges.

Systolic BP 110 – 120 mm Hg

Diastolic BP 70 – 80 mmHg

Pulse 60 - 100/min

Pulse pressure (PP) 40 mmHg (Low PP less than 25% of the systolic BP and high PP greater than 100 mm Hg)

Normal stroke volume (SV) 60 -100 ml

Cardiac output (CO) SV x pulse rate/min

Estimate Cardiac output = Stroke volume / m

Blood pressure variability; Not defined in USA. But desirable ranges ESH guidelines; Systolic day time BP less than 15 mmHg and Diastolic less than 7.9 mmHg and Weighted SD less than 12.8 mmHg for systolic

Definitions.

MAP:PP ratio not defined.

Pulse stiffening ration; Not defined. Pulse pressure * inverse log (std. dev. systolic / std. dev. Diastolic) / (std. dev. systolic / std. dev. Diastolic) - 1 (Pulse pressure X ln (K)/(K-1) where K is systolic Sd /diastolic SD.)

Home arterial stiffness index; Not defined

Home arterial symmetric arterial index: Not defined.

Central blood pressure:Not defined
