Stephen Northrup	R.A. Ramanujan , M.D.	Current dosage is 20 mg. I will increase to 40 mg by taking an additional 20 mg pill as needed for a total of 40 mg. Thank you.	18-02-2025
R.A. Ramanujan , M.D.	Stephen Northrup	Your thinking is in the right direction. Increase Pepcid if no better go back to Omeprazole. Once better teach us how you plan to juggle. Best	18-02-2025
Stephen Northrup	R.A. Ramanujan , M.D.	Evening Dr. Ram. During our visit on 1/16, you recommended I discontinue use of Omeprazole which I had been on for some time and start using Pepcid instead. Unfortunately I have to report that my stomach acid and some bloating has reared its head again. No discomfort in my esophagus but normally in the stomach generally after eating. Same feeling I would get if I failed to take my omeprazole for a day or two. wondering if the Pepcid isn't quite strong enough and if so, can you recommend something else similar to the Omeprazole which gave me relief. Gastrologist just said I had an overly acidic stomach and Prescribed the Omeprazole. No mention of long term use. Thanks.	17-02-2025

## Systolic Variability Trends

**1. CV** –The coefficient of variation (CV) is the ratio of the standard deviation to the mean. The higher the coefficient of variation, the greater the level of dispersion around the mean, Units = mmHg.

**2. ARV** – Average real variability (ARV) is a method for measuring short-term, reading-to-reading, within-subject variability. It is defined as the average of the absolute differences between consecutive readings, Units = mmHg.

**3. SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean), Units = mmHg.

## Diastolic Variability Trends

## Kalman Trends

**1. Mean(Arithmetic Mean)** – Mean is the average of a set of numbers

**2. SD** – Standard deviation is a statistical measurement of variability. It measures how much variation there is from the average (mean).

**3. V-** Variance determines the spread of numbers.. It measures how far each number in the set is from the mean (average) and from every other number in the set.

## PSR

**PSR:** Pulse stiffening ratio (PSR) is the ratio between systolic and diastolic stiffness. It can be expressed as  $PSR = \frac{[systolic\ stiffness]}{[diastolic\ stiffness]}$ .

## HbA1c Trends

**Estimated HbA1c - eHbA1c**

## Others Trends

1. **MAP:PP Ratio**- Mean Arterial Pressure : Pulse Pressure Ratio

2. **HASI**- Home arterial stiffening index

3. **HSASI**- Home Symmetric arterial stiffening index

4. **PP**- Pulse Pressure

5. **WIF or widening factor number. WIF** =  $K-1/\ln(K)-1$ , where K is the variability ratio (  $K = \text{Systolic Std. Dev} / \text{Diastolic Std. Dev}$  )

6. **eIPP**- Elastic component of pulse pressure.  $eIPP = (PP - stPP)$

7. **stPP**- Stiffening component of pulse pressure.  $stPP = PP / (1 + WIF)$

## eCO graph

eCO (Estimated Cardiac Output) Normal range to be added 5 – 10 liters/minute

Units of eCO (Estimated Cardiac Output) – liters/minute

## eCBP graph

eCBP (Estimated Central Blood Pressure) normal range – 0 – 100 mmHg

1. Cardiac output scale is in liters/minute. Normal range at rest is 5-6 liters/min and (with activity goes up to 30 -35 liters/min)

2. Central mean BP is Squared, Mean radial artery BP/diastolic BP in mmHg. Scale in mmHg and range is in mmHg and the scale Should be between 0-50 50-100, 150 and 200 mmHg. No established normal at the moment.

## MAP graph

MAP -Mean arterial blood pressure. MAP = Diastolic blood pressure + 1/3(Systolic blood pressure – Diastolic blood pressure)

Estimated central blood pressure ECBP (ECBP = brachial MBP2/brachial DBP or ECBP = radial MBP2/radial DBP)

### Normal Ranges.

Systolic BP 110 – 120 mm Hg

Diastolic BP 70 – 80 mmHg

Pulse 60 - 100/min

Pulse pressure (PP) 40 mmHg (Low PP less than 25% of the systolic BP and high PP greater than 100 mm Hg)

Normal stroke volume (SV) 60 -100 ml

Cardiac output (CO) SV x pulse rate/min

Estimate Cardiac output = Stroke volume / m

---

Blood pressure variability; Not defined in USA. But desirable ranges ESH guidelines; Systolic day time BP less than 15 mmHg and Diastolic less than 7.9 mmHg and Weighted SD less than 12.8 mmHg for systolic

### Definitions.

MAP:PP ratio not defined.

Pulse stiffening ration; Not defined. Pulse pressure \* inverse log ( std. dev. systolic / std. dev. Diastolic) / (std. dev. systolic / std. dev. Diastolic) - 1 (Pulse pressure X ln (K)/(K-1) where K is systolic Sd /diastolic SD.)

Home arterial stiffness index; Not defined

Home arterial symmetric arterial index: Not defined.

Central blood pressure:Not defined
